

RSA ENVISION®

Log Management Solution

WHAT IS IT?

RSA enVision® gives organisations an integrated log management solution for simplifying compliance, enhancing security and risk mitigation, and optimising IT and network operations through the automated collection, analysis, alerting, auditing, reporting and security storage of all logs.

WHAT DOES IT DO?

RSA enVision collects all the event logs generated by IP devices within your network, permanently archives copies of the data, processes the logs in real-time and generates alerts when it observes suspicious patterns of behavior. Administrators can interrogate the full volume of stored data through an intuitive dashboard, and advanced analytical software turns the complex, unstructured mass of raw data into structured information, giving administrators actionable insights to help them in three main areas:

Simplifying Compliance. Administrators can automatically collect log data about network, file, application and user activity that can significantly help simplify the compliance process. Over 1,100 included reports are tailored to today's specific compliance requirements. The solution also simplifies compliance with whatever legislation emerges in years to come, because it stores all log data without filtration or normalisation and protects it from tampering, providing a verifiably authentic source of archived data.

Enhancing Security and Risk Mitigation. With real-time security event alerts, monitoring and drill-down forensic functionality, the platform gives administrators a clear view of important information. Because they can see and understand the threats and risks, they can take more effective actions to mitigate those risks.

Optimising IT and Network Operations. Managed log data is the best source of information about infrastructure performance and user behavior. IT support staff can leverage the RSA enVision platform to track and manage activity logs for servers, networking equipment and storage platforms, as well as monitor network assets, and the availability and status of people, hardware and business applications. It provides an intelligent forensic tool for troubleshooting infrastructure problems and protecting infrastructure resources, it assists IT managers in help desk operations and provides granular visibility into specific behaviours by end-users.

HOW DOES IT WORK?

RSA enVision can draw logs from up to 40 devices at once – including Windows® servers, Check Point® firewalls and Cisco® routers – without need for client-side software agents. This ensures that All the Data is collected continuously, all of the time. RSA enVision base-lining, trending and reporting functionality gives IT and network administrators a long-term graphical overview of performance and security events, improving planning effectiveness while reducing workload.

Web-based management and RSA enVision Event Explorer™ technology, our highly intelligent analytical tool, provide intuitive control and enhanced, detailed deep-dive and forensic analysis. The enVision ES 160 and ES 260 models, are standalone solutions delivering self-contained, security-hardened appliances that do it all, including data collection, management, analysis and storage. In addition, data itself can be stored using direct attached, online, near-line or offline storage.

enVision ES Series	ES-160-PROMO	ES-260-PROMO
Description	Standalone SIEM appliance	Standalone SIEM appliance
Sustained events PS	100	200
Maximum devices per appliance	20	40
Simultaneous RSA enVision users	4	5
Simultaneous Event Explorer users included/maximum	5	5
Storage	300 GB internal	300 GB internal

SKU	Description	List Price
ES-160 - PROMO	RSA enVision 160 Appliance	\$13,000.00
ES-260 - PROMO	RSA enVision 260 Appliance	\$18,000.00
U160P-260P-S	RSA enVision 160 to 260 Appliance Upgrade	\$8,000.00
SSP-160-12M	Basic Maintenance for RSA enVision ES-160 Appliance for 12 months	\$2,040.00
SSP-260-12M	Basic Maintenance for RSA enVision ES-260 Appliance for 12 months	\$2,890.00
PSP-160-12M	Enhanced Maintenance for RSA enVision ES-160 Appliance for 12 months	\$3,240.00
PSP-260-12M	Enhanced Maintenance for RSA enVision ES-260 Appliance for 12 months	\$4,590.00

PRODUCT SPECIFICATIONS

OPERATING ENVIRONMENT

Security-hardened, embedded Microsoft Windows 2003 Server standard.

Hardware Redundancy

ES: ECC protected RAM.

ES: Redundant/hot-swappable fans, power supplies and RAID-1 protected disks.

ENVIRONMENTAL MONITORING & MANAGEMENT

IPMI 2.0 out-of-band management. 100% "headless" remote appliance mgmnt.

NETWORKING

ES: (2) 10/100/1000TX Ethernet ports included, up to (6) via add-on network interfaces

STORAGE OPTIONS

300 GB Internal

REGULATORY AND AGENCY APPROVAL

ISO9002 certified, UL1950, CSA22.2 no 950, EN 60950, FCCPart15 - Class A, ICES-003 EN55024:1998, EIN55022:1998, EN50082-1, VCCI V-3/2000.4, AS/NZS3548.

Terms & Conditions:

1. This promotion is only available to authorised resellers based in the Asia Pacific Region. 2. Promotion is valid from 01 October 2011 to 31 March 2012. RSA can curtail or extend the Promotion duration, as it deems necessary. 3. The End User Customer must have a ship to address in the Asia Pacific Region. 4. To be eligible for this promotion, orders must be received by RSA before midnight on the 31st of March 2012, unless otherwise provided by RSA. 5. Orders must be placed through an authorised SecurWorld Distributor. 6. All other terms and conditions of any existing channel partner agreements will apply to each purchase. 7. Pricing is exclusive of freight charges, customs duty or any local taxes. 8. RSA retains the right to review any order received for eligibility for the promotional pricing listed in this campaign and any decision taken by RSA in this regard shall be final and binding and shall not be subjected to any dispute or challenge.

APPLICATION SOFTWARE

The RSA enVision platform, featuring RSA enVision LogSmart™ IPDB; real-time, inline correlation with automatic threat scoring; universal device support; over 1,100 standard reports with full report wizard; Event Explorer advanced visualisation and forensic analysis tool; ILM protection, retention policy management, tiered storage support.

POWER OPTIONS

Redundant, load-sharing 400-watt power supplies. 120/240 volt auto-switching.

PHYSICAL

29.3 x 17.5 x 3.4 inches, 74.4 x 44.5 x 8.6 cm (DxWxH). Rack-mount slide rails included (requires 4-post rack).

WARRANTY

90-day hardware warranty extendable to 5 years with active maintenance contract.
